

Virtual Zoo was created by scanning a drawing of a zoo animal by each student into a PowerPoint. Then a Zoo gate was created on the first slide. An information sign was copied into each picture and a signpost from clipart was copied to each slide also.

The signposts are hyperlinks to the next animal.

Insert an action button onto the signpost then hyperlink.

The information signs were created with action buttons. The information sign will link to the students report on their animal later in the semester. The students will narrate the information on their animal.

Right click on the large button, then right click, select the order button, and bring to front.
